Artificial Intelligence For Business Leaders

Yogesh Haribhau Kulkarni

YHK

Outline

About Me

Yogesh Haribhau Kulkarni

Bio:

- 20+ years in CAD/Engineering software development
- Got Bachelors, Masters and Doctoral degrees in Mechanical Engineering (specialization: Geometric Modeling Algorithms).
- Currently doing Coaching in fields such as Data Science, Artificial Intelligence Machine-Deep Learning (ML/DL) and Natural Language Processing (NLP).
- Feel free to follow me at:
  - Github (github.com/yogeshhk)
  - LinkedIn (www.linkedin.com/in/yogeshkulkarni/)
  - Medium (yogeshharibhaukulkarni.medium.com)
  - Send email to yogeshkulkarni at yahoo dot com

Office Hours: Saturdays, 2 to 5pm (IST); Free-Open to all; email for appointment.

YHK

AI for Business Leaders

From Awareness to Execution

YHK

Welcome

- Welcome, leaders and change-makers!
- Today's focus: Turning AI from **buzzword to business value**.
- A collaborative, hands-on learning experience.
- Interactive sessions, real examples, and practical takeaways.
- Outcome: A clear AI roadmap for your organization.

YHK

Agenda Overview

- **Session 1:** Demystifying AI, From Buzzword to Business Enabler
- **Session 2:** The Art of the Possible, Global and Indian Success Stories
- **Session 3:** Hands-On Experience, Boosting Productivity with AI Tools
- **Session 4:** AI Strategy, ROI, FinOps, and Governance
- **Session 5:** Co-Creation, Translating Learning into AI Opportunities
- **Wrap-up:** Roadmap, Next Steps, and Action Plan

YHK

Workshop Objectives

By the end of this workshop, you will:

- Develop a **shared understanding** of AI fundamentals and business impact
- Learn from **Indian and global AI success stories** relevant to your industry
- Experience **productivity improvements** using Generative AI tools first-hand
- Identify **realistic, short-term AI use cases** in your business functions
- Understand **AI ROI, costs, governance, and risk**, the executive essentials
- Build a roadmap to measure AI's **business value and cultural impact**

YHK

Demystifying AI

From Buzzword to Business Enabler

YHK

What Is AI?, A Business Leader's Definition

Artificial Intelligence: Machines performing tasks that normally require human intelligence, perceiving, reasoning, deciding, creating.

The key shift from traditional software:

- Traditional software: A programmer writes every rule explicitly.
  - *"If customer buys X, show offer Y"*, a human wrote that rule.
- AI / Machine Learning: The system *learns the rules from data automatically*.
  - *"We showed 10 million customers their history, the model figured out what to recommend."*

Plain English: AI is a junior analyst who has read everything, never sleeps, and gets better every time it gets feedback, but still needs a senior leader to set direction and review critical decisions.

YHK

The Four Types of AI, Business Lens

- **Predictive AI:** Learns from historical data to forecast future outcomes.
  Example: Sales forecasting, churn prediction, demand planning.
- **Generative AI:** Creates new content, text, images, code, audio.
  Example: ChatGPT drafting proposals, DALL-E creating ad visuals.
- **Agentic AI:** Autonomous systems that plan and execute multi-step tasks.
  Example: AI agent that resolves a customer complaint end-to-end without human input.
- **Ethical / Responsible AI:** Framework ensuring AI is fair, transparent, and accountable.
  This is not a product, it is a discipline every AI deployment must follow.

YHK

The AI Hierarchy, How the Pieces Fit

- **AI (broadest):** Any machine mimicking human intelligence
- **Machine Learning (ML):** AI that learns from data, no explicit rules needed
- **Deep Learning:** ML using neural networks; powers image recognition, speech
- **Generative AI:** Deep Learning that *creates* new content
- **LLMs (Large Language Models):** The engine behind ChatGPT, Claude, Gemini, trained on the internet at massive scale
- **AI Agents:** LLMs given tools (web, email, databases) to take autonomous actions

For business leaders: You don't need to build these. You need to understand which layer solves your problem, and which vendor or team to trust to build it for you.

YHK

From Automation to Intelligence

- **Automation:** Rules-based, repetitive task handling. Does exactly what you programmed.
- **AI:** Learns patterns, predicts outcomes, and adapts over time.
- **Business analogy:**
  - Automation = "Doing things right."
  - AI = "Doing the *right* things, smarter."
- **Example:** Basic chatbot routes calls by keyword (automation). AI chatbot understands intent, sentiment, and context, and improves with every interaction (intelligence).

YHK

From Automation to Intelligence

Definitions

Automation vs. AI workflow vs. AI agent

	Automation	AI workflow	AI agent
Definition	A program that executes predefined, rule-based tasks automatically	A program that calls an LLM via API for one or more steps	A program designed to perform non-deterministic tasks autonomously
Core foundations	Boolean logic	Boolean logic, Fuzzy logic	Fuzzy logic, Autonomy
Tasks	Deterministic, predefined tasks	Deterministic tasks requiring flexibility	Non-deterministic, adaptive tasks
Strengths	• Delivers reliable outcomes • Fast to execute	• Better handling of complex rules • Great for pattern recognition	• Highly adaptive to new variables • Simulates human-like behavior and reasoning
Weaknesses	• Limited to tasks explicitly programmed • Cannot adapt to new scenarios • Struggles with complexity	• Requires data to train models effectively • Harder to debug and interpret	• Less reliable, may produce unpredictable undesired outcomes • Slower to execute
Example	Send a Slack notification every time a new lead signs up on our website	Analyze, score and route every website inbound lead using ChatGPT	Perform a full internet search on every inbound lead and update infos

(Ref: Automation vs AI Workflows vs AI Agents)

Myths vs. Reality, What Every Leader Must Know

- **Myth:** AI understands like a human does.
  Reality: AI identifies statistical patterns. It does not "think." It can be confidently wrong.
- **Myth:** AI is always accurate.
  Reality: Models "hallucinate", generating plausible but incorrect outputs. Human oversight is essential for high-stakes decisions.
- **Myth:** AI will replace our workforce.
  Reality: AI replaces repetitive tasks, not roles. Employees who use AI well become 2×–10× more productive. Demand for skilled people rises.
- **Myth:** We need to train our own AI model.
  Reality: For 95% of business use cases, you *integrate* existing AI (ChatGPT, Claude, Gemini) via APIs on top of your own data.
- **Myth:** Enterprise AI and consumer AI (ChatGPT free) are the same.
  Reality: Enterprise AI has data isolation, compliance, SLAs, cost controls, consumer tools do not.

YHK

Where AI Is Already in Your Business, Right Now

Even if your organization hasn't formally adopted AI, it is already present:

- **Email:** Gmail Smart Reply, Outlook Copilot summarizing threads
- **Sales CRM:** Salesforce Einstein, predicting deal close probability
- **Finance:** AI flagging anomalous transactions for fraud detection
- **HR:** Resume screening algorithms, employee attrition prediction
- **Marketing:** Dynamic pricing, personalized ad targeting, content generation
- **Customer Support:** Chatbots handling Tier-1 queries, ticket routing
- **Supply Chain:** Demand forecasting, delivery route optimization
- **Manufacturing:** Predictive maintenance, catching failures before they happen

The question is no longer "should we?", it's "how fast, and how responsibly?"

YHK

Enterprise vs. Consumer AI, Know the Difference

Aspect	Consumer (free tools)	Enterprise AI
Example	ChatGPT free, Gemini free	Azure OpenAI, AWS Bedrock
Data Privacy	Shared; may train on your data	Isolated; contractually protected
Compliance	None	SOC2, GDPR, ISO 27001
Cost	Free or flat	Token-based; FinOps governance needed
Reliability	Best-effort	SLA guaranteed
Integration	Manual / copy-paste	API, CRM, ERP, workflows
Auditability	None	Full logging, audit trail

Critical for leaders: Never allow employees to paste confidential data, customer PII, or trade secrets into consumer AI tools. This is a data leakage risk.

YHK

AI What It Cannot Do, Honest Expectations

Setting realistic expectations prevents failed projects and board-level disappointment:

- **AI cannot reason causally:** It finds correlations, not true cause-and-effect. *"Ice cream sales and drownings are correlated, the AI doesn't know summer is the cause."*
- **AI cannot replace human judgment in ethical decisions:** Hiring, promotion, loan approval, legal and moral accountability stays with humans.
- **AI cannot work without data:** Garbage data in, garbage output out. Data quality is a prerequisite.
- **AI cannot explain itself easily:** Most powerful models are "black boxes." Regulated industries (banking, healthcare) need explainability.
- **AI needs maintenance:** Models drift over time as the world changes. Ongoing investment required.

YHK

Hands-On Exercise: Prompt Engineering Basics

- **Activity:** Explore how AI interprets different prompts.
- Compare these two:
  - *"Summarize this customer complaint in one line."*
  - *"You are a customer success manager. Turn this complaint into a polite, empathetic response email with a resolution offer and follow-up date."*
- Discuss: How does phrasing, role, and context change the output?
- **Key insight:** Better prompts = better results. AI quality is a *leadership skill*.
- Reflection: "Where could clearer prompting improve my team's output this week?"

YHK

Hands-On Exercise: Prompt Engineering Basics

The Perfect Prompt Structure

Role	You are an experienced Text author for web texts.
Task	Your task: Create a Blog post.
Context (topic, goal, details)	Topic: Family books a beach holiday. Target group: Families with schoolchildren
Format	Length: 500 words, as rich text, with H2 headlines, bullet points, bold type, style: loose, dull
Example ("few shot")	Example: "You should think about this when booking your family beach holiday"

(Ref: Prompt Engineering, ai-rockstars.com)

Prompting Patterns Every Leader Should Know

You do not need to code. You need to communicate with AI effectively.

- **Role Prompting:** "You are a strategy consultant with 20 years in consumer electronics. Analyze this market data and identify the top 3 growth opportunities."
  Why it works: Activates the right vocabulary, framing, and level of analysis.
- **Context + Task:** Always give AI: Who you are, what you need, the format you want, and any constraints.
  "Write a 5-bullet executive summary of this report for a board audience with no AI background."
- **Iterate, Don't Accept First Output:** AI output is a first draft, not a final answer. Refine with follow-up prompts.
  "Make it more concise" / "Add a risk section" / "Change tone to be more assertive."
- **Structured Output:** Ask AI for tables, bullet points, or specific sections, output becomes more actionable.

YHK

The Art of the Possible

Global and Indian Success Stories

Indian Success Stories in AI

- **Havells:** AI-driven personalized marketing campaigns, higher conversion, lower CAC.
- **Polycab:** Predictive demand planning reducing stockouts; improved working capital efficiency.
- **Crompton:** AI-powered chatbots for customer service, reduced call center load by 35%.
- **Bajaj Electricals:** Dealer analytics providing actionable sales insights to field teams.
- **Tata Steel:** Computer vision on production lines, defect detection accuracy improved to 99%+.
- **HDFC Bank:** AI fraud detection engine processing millions of transactions in real-time.

Lesson: These are not moonshots. They are *practical, incremental* AI adoptions with measurable ROI, started with one use case, then scaled.

YHK

Global Inspiration, How Industry Leaders Use AI

- **Schneider Electric:** Predictive maintenance AI cuts unplanned downtime by 30–40%.
- **Philips:** AI-personalized customer experience, adaptive product recommendations at scale.
- **LG:** Mining customer feedback with NLP to drive product innovation cycles.
- **Amazon:** AI-powered demand forecasting and warehouse robotics, the backbone of 1-day delivery.
- **Google DeepMind:** AI optimizing Google's own data center cooling, 15% energy reduction.
- **AlphaFold (DeepMind):** Solved protein folding, accelerated drug discovery by years. Nobel Prize 2024.

Common success factors across all these:

- Leadership sponsorship and clear business problem
- Strong data foundations built *before* AI deployment
- Experimentation mindset, start small, measure, scale

YHK

AI Across Business Functions, The Opportunity Map

Function	AI Application	Business Impact
Sales	Deal probability scoring	Faster pipeline decisions
Marketing	Personalization at scale	Higher conversion rates
Finance	Anomaly detection, forecasting	Reduced fraud, better planning
HR	Attrition prediction, screening	Retention, faster hiring
Supply Chain	Demand forecasting, routing	Lower inventory, fewer stockouts
Customer Service	Ticket triage, response drafting	Lower cost, faster resolution
Manufacturing	Predictive maintenance, QC	Reduced downtime
Legal / Compliance	Contract review, risk flagging	Faster review cycles

YHK

Group Activity: Relevance Mapping

- **Activity:** Map showcased examples to your business functions.
- Discuss in groups:
  - Which examples resonate most with your current priorities?
  - What data do you already have that could power this?
  - What enablers (people, process, tech) would you need?
- **Output:** Identify 2–3 relevant use cases per function.
- Facilitator debrief: Patterns and quick wins.

(Ref: Team Collaboration Activity)

YHK

Hands-On Experience

Boosting Productivity with AI Tools

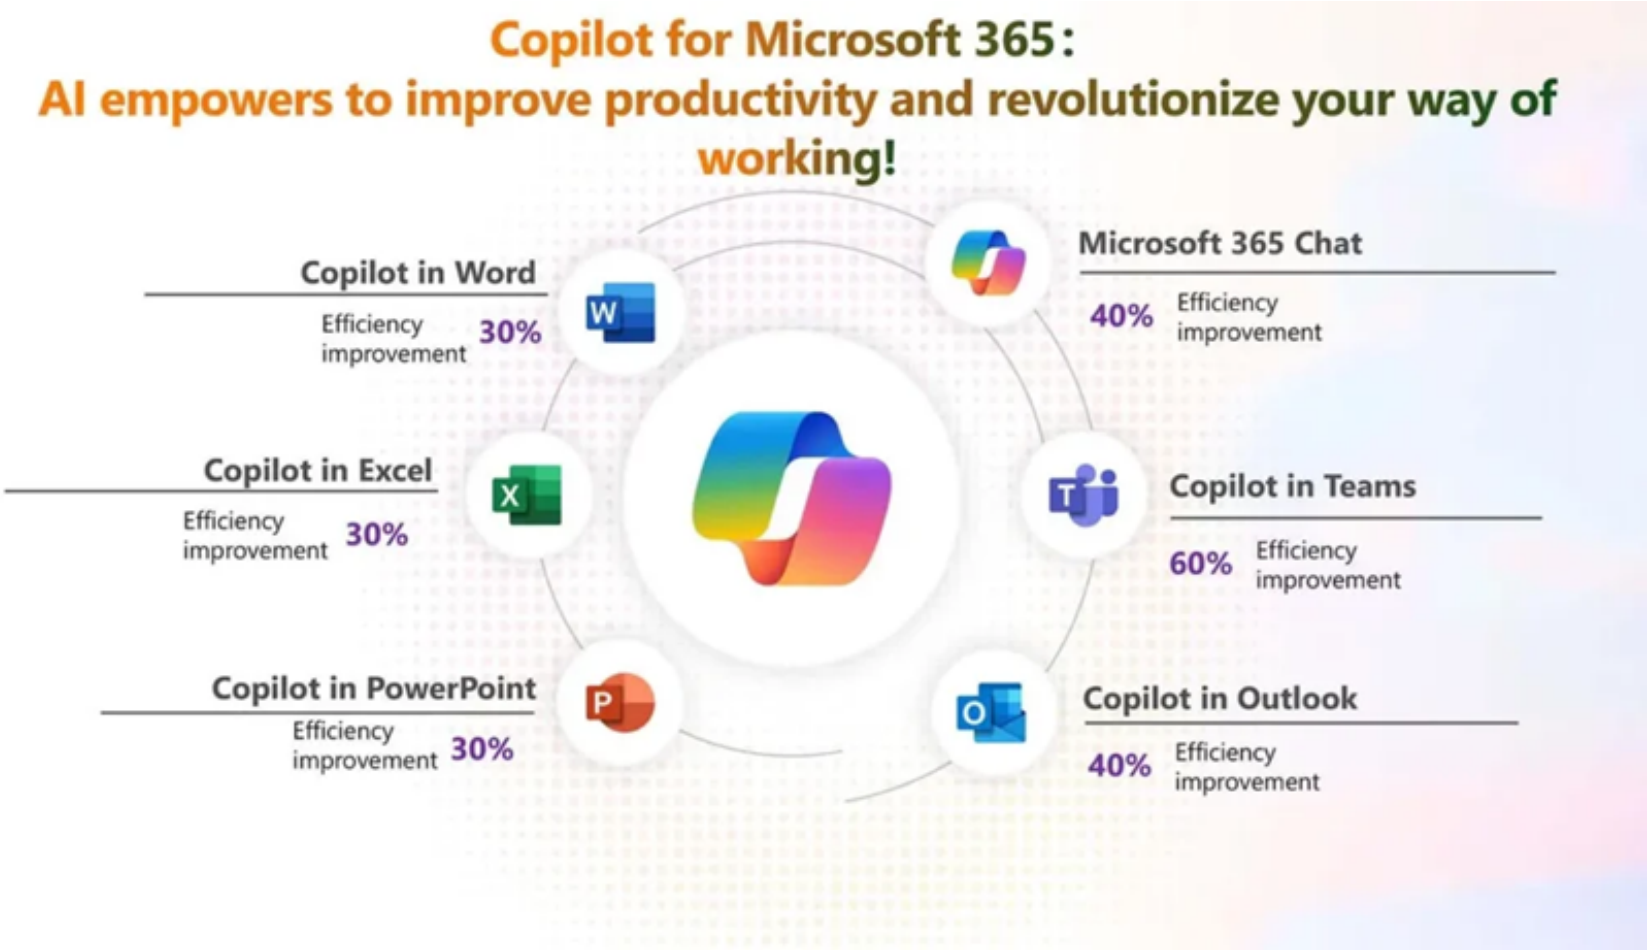
YHK

Exploring Microsoft Copilot

- **Objective:** Discover how Copilot enhances daily leadership productivity.
- AI assistance across Microsoft 365:
  - **Excel:** Analyze and visualize data trends in seconds.
  - **Outlook:** Draft, summarize, and prioritize emails.
  - **PowerPoint:** Auto-generate presentations from a brief.
  - **Teams:** Meeting summaries, action items, follow-ups.
  - **Word:** First-draft documents from bullet points.
- **Key takeaway:** AI amplifies human creativity and efficiency, it handles the "blank page" problem.

YHK

Exploring Microsoft Copilot



(Ref: Microsoft Copilot Integration, CTO Magazine)

Mini Hands-On Activities

- **Task 1:** Generate a meeting summary from a transcript in Teams.
  Prompt: "Summarize this meeting. List decisions made, open questions, and action items with owners."
- **Task 2:** Create a product pitch deck using Copilot in PowerPoint.
  Prompt: "Create a 5-slide investor pitch for [product]. Include problem, solution, market size, traction, and ask."
- **Task 3:** Use Copilot in Excel to extract trends from last quarter's data.
  Prompt: "Which SKUs had the highest revenue growth quarter-on-quarter? Show me a chart."
- **Task 4:** Draft a strategic response to a customer escalation in Outlook.
  Prompt: "Write an empathetic yet professional response to this customer complaint. Offer a resolution and a follow-up date."

Debrief: What surprised you? What felt intuitive? Which task could save you 30 minutes tomorrow?

YHK

Beyond Copilot, The Broader AI Tool Landscape

Copilot is one tool. The ecosystem is much wider:

- **ChatGPT / Claude / Gemini:** General-purpose assistants for research, writing, analysis
- **Perplexity AI:** Real-time web research with citations, replaces preliminary analyst work
- **Jasper / Copy.ai:** Marketing content at scale, ad copy, SEO articles, campaign variations
- **Salesforce Einstein:** AI embedded in CRM, forecasting, next-best-action, auto-summaries
- **Notion AI:** Document intelligence, meeting notes, project summaries
- **Otter.ai:** Real-time meeting transcription and summarization
- **Custom internal AI apps:** RAG-based Q&A on your own documents, policies, and knowledge base

Key principle for leaders: Pick tools that integrate with your existing workflows. Adoption fails when AI requires extra steps.

YHK

Linking Personal Gains to Organizational Value

- Translate individual productivity into team outcomes:
  - Time saved per person $\times$ team size = hours of capacity reclaimed per week
  - Clarity gained from AI-assisted analysis $\rightarrow$ faster, better decisions
  - Automation of repetitive work $\rightarrow$ higher employee satisfaction and retention
- **Example calculation:**
  - 10 leaders save 2 hrs/week using AI for meeting summaries and report drafting
  - At an average fully-loaded cost of INR 5,000/hr = INR 1,00,000/week in reclaimed value
  - Annual: INR 50 lakhs, from one AI tool, one habit change
- Identify cultural enablers: psychological safety to experiment, top-down permission to use AI tools, sharing wins across teams
- **Output:** Personal AI Productivity Action Plan, one habit to start this week

YHK

AI Strategy for Leaders

ROI, FinOps, and Governance, The Executive Essentials

YHK

The AI Investment Decision, Build vs. Buy vs. Integrate

Option	When	Cost	Time to Value	Risk
Buy SaaS AI	Commodity task	Low	Weeks	Vendor lock-in
Integrate LLM API	Custom on your data	Medium	1–3 months	Provider dependency
Fine-tune model	High-volume, specific	High	3–6 months	Needs labeled data
Train own model	Core IP, extreme scale	Very High	12+ months	>$1M budget

For most business leaders: The answer is **Integrate LLM API + your own data (RAG)**.

- 90% of internal use cases solved this way
- No need to collect new training data, use your existing documents, CRM, ERP
- 10× cheaper and faster than building from scratch

YHK

How to Think About AI ROI

The basic ROI question: For every rupee invested in AI, what do I get back?

- **Efficiency gains:** Time saved $\times$ volume $\times$ cost rate
  Example: AI triage reduces ticket handling from 15 min to 3 min. 1000 tickets/day = 200 hrs saved/day.
- **Quality gains:** Errors avoided $\times$ cost per error
  Example: AI catches 80% of compliance exceptions before they become regulatory fines.
- **Revenue acceleration:** Faster product launches, better conversion, higher retention
  Example: Personalized marketing AI improves email CTR by 25%.
- **Cost avoidance:** AI handles Tier-1 support = fewer support hires needed

Start with a baseline: Measure your current state *before* AI deployment. You cannot prove ROI without a before-and-after comparison.

YHK

AI Cost Components, Know What You Are Paying For

- **Model / API Cost:** Pay-per-use pricing from AI providers (OpenAI, Google, Anthropic). Typically charged per 1,000 words processed.
  - *Rule of thumb: Advanced AI ≈ USD 2–10 per million words. Fast, smaller AI ≈ USD 0.10–0.50 per million words.*
- **Integration / Development Cost:** Engineering effort to connect AI to your systems (CRM, ERP, support tools)
- **Data Preparation:** Cleaning and structuring your existing data so AI can use it reliably
- **Infrastructure:** Cloud storage, vector databases, hosting
- **Security & Compliance:** Data encryption, access controls, audit logging
- **Human Oversight:** Reviewers, governance team, ongoing quality monitoring
- **Training & Change Management:** Staff adoption programs, policy documentation

YHK

FinOps for AI, Controlling AI Costs at Scale

As AI adoption grows, costs can spiral without governance. Key controls:

- **Right-size the model:** Use the cheapest model that meets your quality bar. Do not use the most powerful AI for every task.
  - *Simple task (summarize email): Use fast, cheap model. Complex analysis: Use advanced model.*
- **Monitor cost per use case:** Track AI spend by department, by feature, by user.
- **Set budgets and alerts:** Treat AI API spend like cloud compute, set monthly budgets, get alerts at 80% threshold.
- **Batch non-urgent tasks:** Run reports, analyses, and document processing overnight in bulk at 50% lower cost.
- **Usage governance:** Define who can use which tier of AI. Require justification for expensive AI usage.

Target: Define a *cost-per-outcome* KPI (e.g., cost per resolved ticket, cost per generated lead) before launching any AI feature.

YHK

Prioritizing AI Investments, The Impact-Effort Matrix

Use this to sequence your AI roadmap:

Quadrant	Effort	Action
High Impact, Low Effort	Use existing AI SaaS	**Do immediately (Quick Wins)**
High Impact, High Effort	Custom AI development	Plan and invest (Strategic Bets)
Low Impact, Low Effort	Nice-to-have tools	Automate or skip
Low Impact, High Effort		Avoid or stop

Quick Wins to target in your first 90 days:

- AI-assisted meeting summaries and action items (Copilot / Otter.ai)
- AI-powered first-draft for proposals, reports, and communications
- AI chatbot for internal HR / IT policy Q&A
- Customer support ticket classification and routing

YHK

AI Governance, What Every Leader Must Establish

Without governance, AI creates risk. With it, AI creates value safely.

- **AI Usage Policy:** What data can go to AI tools? What is prohibited? (PII, trade secrets, financials never go into consumer AI tools.)
- **Approval Workflow:** How does a team get approval to deploy an AI feature to customers or operations?
- **Human-in-the-Loop Rules:** Which AI outputs require human review before action? (Customer communications, financial decisions, HR outcomes, always.)
- **Audit Trail:** Are AI interactions logged? Who can access the logs? For how long?
- **Incident Response:** What happens when AI makes a wrong decision that affects a customer or a regulatory requirement?
- **Vendor Review:** Are AI providers contractually bound not to use your data for training? Do they have the right certifications?

YHK

Key AI Risks, The Executive Risk Register

- **Hallucinations:** AI confidently states wrong facts. Risk in customer communications, financial reports, legal documents.
  Mitigation: Ground AI with your own verified data (RAG); require human sign-off on high-stakes outputs.
- **Data Leakage:** Employee pastes customer PII or trade secrets into a consumer AI tool.
  Mitigation: Enterprise-only AI policy; DLP tools; training.
- **Bias & Unfairness:** AI trained on historical data perpetuates historical inequities in hiring, pricing, lending.
  Mitigation: Regular bias audits; diverse data sources; human review of high-impact decisions.
- **Regulatory Exposure:** EU AI Act (2024) classifies AI by risk level, high-risk use cases (HR, credit, healthcare) require conformity assessment.
- **Reputational Risk:** AI-generated content going public without review causing brand damage.
  Mitigation: Mandatory human approval gate for all external AI-generated content.

YHK

AI Bias, Ethics, and Environmental Responsibility

Real-world bias examples every leader should know:

- Amazon's hiring AI (2018) systematically downgraded female candidates, trained on male-dominated historical data. Shut down.
- Facial recognition tools showed significantly higher error rates for people with darker skin tones, led to wrongful arrests.
- Loan approval algorithms replicating historical "redlining" patterns, regulatory fines followed.

What responsible leaders do:

- Audit AI decisions regularly for disparate impact across groups
- Ensure diverse training data and diverse AI review teams
- Follow the EU AI Act risk-based classification framework

Environmental note: Training large AI models generates hundreds of tonnes of CO_2. AI also optimizes energy systems, net impact depends on how we use it. "Innovation with responsibility."

YHK

AI Regulation Landscape, What Leaders Must Track

- **EU AI Act (2024, world's first comprehensive AI law):**
  - Risk-based: Unacceptable risk (banned) → High risk (regulated) → Limited / Minimal risk
  - High-risk categories include: HR / recruitment AI, credit scoring AI, critical infrastructure
  - Mandatory conformity assessments, human oversight, transparency obligations
- **US Executive Order on AI (2023):** Safety standards, red-teaming requirements for frontier AI models
- **India's approach:** Currently innovation-first, with MEITY guidelines evolving, expect regulation within 2–3 years
- **GDPR (Europe):** Any AI using EU citizen personal data must have legal basis and right-to-explanation provisions

Leader action: Have Legal and Compliance review AI deployments before launch. Build auditability in from day one.

YHK

Co-Creation

Translating Learning into AI Opportunities

Identifying AI Opportunities, The 4-Lens Framework

- **Goal:** Spot functional challenges that AI can address.
- Apply the **4-Lens Framework** to every business problem:
  - **Efficiency:** Where are we spending time on tasks AI could do?
    Examples: Report generation, data extraction, document review
  - **Experience:** Where are customers or employees frustrated?
    Examples: Long support wait times, manual onboarding, repetitive queries
  - **Decision-making:** Where do we have data but lack clear insights?
    Examples: Pricing decisions, demand forecasting, risk assessment
  - **Innovation:** What new products or services become possible with AI?
    Examples: Personalized product lines, AI-powered advisory services
- Group brainstorming by function (Sales, Ops, HR, Finance, Marketing, Supply Chain)

YHK

AI Use Case Canvas, Template

For each opportunity, fill in:

- **Problem Statement:** (1 sentence, what is broken or slow today?)
- **Current Pain:** (Quantify, hours/week, error rate, customer satisfaction score, cost)
- **AI-Assisted Future State:** What does the workflow look like with AI? Who does what differently?
- **AI Approach:** Existing SaaS tool? LLM API on internal data? Custom model?
- **Data Needed:** What existing data (documents, transactions, emails, records) does the AI need access to?
- **Success Metric:** How will you measure success? (e.g., 30% reduction in processing time, NPS +10)
- **Risk / Constraint:** Data privacy concern? Regulatory requirement? Human review needed?
- **Effort Estimate:** Quick win (weeks) / medium-term (months) / strategic bet (6–12 months)?

YHK

Evaluating Feasibility and Impact

- Classify opportunities by implementation timeline:
  - **Short-term (0–3 months):** Existing AI tools, minimal integration, immediate productivity gains
  - **Medium-term (3–9 months):** Custom AI on internal data, process redesign required
  - **Long-term (9–18 months):** AI-native products, significant organizational change
- Score each opportunity on:
  - **Business Impact:** Revenue, cost, experience (High / Medium / Low)
  - **Implementation Effort:** Data availability, technical complexity, change management (High / Medium / Low)
  - **Risk Level:** Regulatory, reputational, operational (High / Medium / Low)
- **Prioritize:** High Impact + Low Effort + Low Risk = Start here

YHK

Presenting AI Opportunity Canvases

Each group presents their top 1–2 AI opportunity ideas:

- Business problem and current pain (quantified)
- Proposed AI solution and workflow change
- Expected impact and success metrics
- Data readiness assessment
- Risks and mitigation plan

Evaluation criteria:

- Efficiency gain (% time or cost reduction)
- Experience improvement (customer / employee satisfaction score)
- Revenue contribution potential (pipeline, conversion, retention)
- Feasibility within 90 days

Facilitator synthesizes top enterprise themes and patterns across functions.

YHK

Wrap-Up: Your AI Roadmap

From Learning to Action

YHK

Building Your 6–12 Month AI Roadmap

Agree on these with your leadership team before leaving today:

- **3–5 Priority Use Cases:** Ranked by ROI $\times$ feasibility. Start with quick wins.
- **Investment Areas:**
  - Tooling: AI platform licenses, API access, data infrastructure
  - People: 1–2 AI champions per function, AI governance lead
  - Training: This workshop $\rightarrow$ team-level AI literacy programs
- **Governance:** Finalize AI usage policy, approval workflow, audit mechanism, before deployment.
- **Milestones:**
  - Month 1–2: AI policy published. Quick-win tools rolled out. Champions identified.
  - Month 3–4: 2–3 AI use cases live in production with baseline metrics tracked.
  - Month 5–6: AI ROI report to board. FinOps dashboards live. Governance review.
  - Month 7–12: AI embedded in core business processes. Organizational AI maturity assessed.

YHK

How to Drive AI Adoption, The Leadership Playbook

What kills AI adoption:

- Random experimentation without shared learning, 20 teams, 20 tools, no coordination
- Fear and resistance, employees worried AI threatens their jobs
- No clear ownership, everyone waits, no one acts

What works:

- **AI Champions:** 1–2 enthusiastic adopters per team. Give them time, budget, and air cover.
- **Visible leadership use:** When the CEO and leadership team visibly use AI tools, adoption accelerates across the org.
- **Psychological safety:** Reward experimentation, not just success. Celebrate learning from failed AI pilots.
- **Shared learning:** Monthly AI wins newsletter / internal community. What worked, what didn't, how to replicate.
- **Quick wins first:** Show business impact within 30 days. Momentum is everything.

YHK

What AI Means for Your Workforce

AI creates new roles:

- Prompt Engineers, AI Product Managers, AI Ethics Officers
- Data Curators, AI Operations Managers, Evaluation Specialists

Existing roles transforming:

- Marketing Managers → AI-augmented content strategists (directing AI, not creating manually)
- Finance Analysts → AI-augmented insight generators (interpreting AI outputs, not building models)
- HR Managers → AI-augmented people strategists (using AI for workforce analytics)
- Customer Success → AI-augmented relationship managers (AI handles Tier-1, humans handle Tier-3)

Skills to develop across your org: AI literacy, critical evaluation of AI outputs, prompt communication skills, data interpretation, and ethical judgment.

YHK

The Future of AI in Business, Where This Is Going

- **Agentic AI at scale (2025–2026):** AI agents handling end-to-end business processes, from customer onboarding to invoice processing, with minimal human intervention
- **Multimodal AI:** AI that simultaneously processes text, images, voice, and video, richer customer insights, richer products
- **Physical AI:** Robotics powered by AI entering manufacturing, logistics, healthcare, not just software
- **AI-native organizations:** Companies built from day one around AI capabilities, disrupting incumbents who bolt AI onto legacy processes
- **Personalization at individual scale:** Every customer interaction, product, and service tailored to the individual, at zero marginal cost

Leader takeaway: Plan for AI-augmented operations in the near term. Invest in AI literacy, governance, and data foundations now. The organizations that build these capabilities today will be the category leaders of 2027.

YHK

Limits on AI, Staying Grounded

Setting honest expectations prevents failed projects and board-level disappointment:

- **No true reasoning:** AI finds patterns, not cause-and-effect. Human judgment remains essential.
- **Accuracy limits:** Every AI system has an error rate. Critical decisions need human review.
- **Data dependency:** AI is only as good as the data it is trained or grounded on. Data quality is a prerequisite, not an afterthought.
- **Black-box risk:** Most powerful AI models cannot explain their reasoning, regulatory and trust risk in high-stakes domains.
- **Maintenance burden:** AI systems drift over time as the world changes. Ongoing investment in monitoring and updates is required.
- **Change management:** Technology is the easy part. People, process, and culture change is the hard part.

YHK

Key Takeaways and Next Steps

- **Shared understanding:** AI as a practical, deployable business enabler, not a science project.
- **Inspiration:** Proven patterns from Indian peers and global leaders in your industry.
- **Confidence:** Hands-on experience using AI tools in your daily workflow.
- **Action:** Concrete opportunities identified per function, with feasibility and ROI assessed.
- **Governance:** Risk, regulation, and responsible use, non-negotiable foundations.

Immediate next steps:

- **This week:** Form AI Taskforce. Assign AI champions. Publish AI usage policy.
- **Month 1:** Pilot top 2–3 use cases. Establish baseline metrics.
- **Quarter 1:** Track impact. Report to board. Decide on scaling investment.

YHK

Thank You, Your Reflection

- Thank you for your participation and openness to experimentation!
- **Take 60 seconds to reflect:**
  - "What is the *one* AI action I will take tomorrow morning?"
  - "Which team member will I make my AI champion?"
  - "How will I enable my team to use AI *responsibly and effectively*?"
  - "What data do I need to get in order before my first AI project?"
- Stay curious. Experiment boldly. Lead responsibly.

"The leaders who will thrive in the AI era are not those who understand AI best, they are those who ask the best questions of it."

YHK
