India's Smart Play in the AI Race: Building from the Ground Up

India is approaching AI differently than the rest of the world... impressed by the strategy.

While global powers compete to build the biggest AI models, India's Minister **Ashwini Vaishnaw** outlined a practical five-layer approach at Davos that focuses on real-world impact over prestige:

✅ Applications that solve actual problems

✅ Accessible AI models (20-50B parameters work for 95% of tasks!)

✅ Democratized computing (38,000 GPUs at 1/3rd global cost)

✅ Robust data center infrastructure ($70B investments)

✅ Reliable energy foundation (nuclear-powered AI through SHANTI Act)

What strikes the most? India is training 10 million people in AI skills and making compute accessible to everyone, students, startups, researchers. Not just the big tech giants.

The message is clear: AI leadership isn't just about who builds the biggest model, it's about who deploys it most effectively.

Check out my sketchnote as a visual representation of India's five-layer AI strategy! 📊
