Haven't you MCP-ed your service yet? 😬 Huuughhhh 🤖, ok, let's see some high level info.....

Model Context Protocol (MCP), proposed by Anthropic, is a standardized interface for calling services, tools, and more, from LLMs (Large Language Models) 🚀

This means you can focus on your agent or application logic without getting bogged down by different tool-calling methods (think function/tool calling as it happens today).

Think of it like a web API—but for LLM interactions. ♦ ♦ ♦

MCP servers can:

- ✅ Expose data through Resources (similar to GET endpoints—used to load info into the LLM's context)
- ✅ Provide functionality through Tools (like POST endpoints—used to execute code or trigger side effects)
- ✅ Define interaction patterns through Prompts (reusable templates for LLM interactions)
