🚀 Embrace the Challenge: AI-By-Bharat! IN 💡

Have you caught wind of the exciting exchange between Sam Altman of OpenAI and CP Gurnani of Tech Mahindra? They tackled the question: Can Indians build ChatGPT-like AI under budget? 💬 💰 It was taken as a challenge. Some gave a patriotic angle and felt insulated, especially with the 'Hopeless' remark, while some thought that it is a practical limitations that Sam spoke of, in general. Well, we can debate on it till 🐮 s come home.

But this surely brought on crucial point to forefront, apart from 'AI-For-Bharat', don't we need 'AI-By-Bharat'?

While 'AI-For-Bharat' is valuable, it doesn't quite encompass the spirit of self-reliance that 'AI-By-Bharat' entails. Who truly owns the AI technology when we use cloud services or open-source frameworks? 😬 It's a complex matter to define, but imagine a litmus test: if there were sanctions against India, would your AI-powered product or technology still function? 💪

Let's gauge where we stand on the 'AI-By-Bharat' spectrum! To do this, I've initiated a 📄 GitHub page, 'Awesome AI-By-Bharat' (<https://lnkd.in/dhtDyHTM>) where we can gather efforts and projects driving the 'AI-By-Bharat' vision. I'd love your contributions! Let's fill it together with relevant projects, papers, courses, and more! 📊 📄

I've also penned down my thoughts on 'AI-By-Bharat' in a Medium story: <https://lnkd.in/dqwXCRsY>

💡 Join the Movement! Contribute & Collaborate! 🤝🤝

Calling all AI enthusiasts, developers, researchers, and visionaries! Let's join forces and pave the way for 'AI-By-Bharat' together! Share information about any relevant projects or efforts shaping our AI landscape! File PRs to the README on the 'Awesome AI-By-Bharat' repository, and let's amplify India's AI potential! 📧 👥
