Shoulders of Giants

During my days of transitioning to Data Science, lots of resources helped me ramp up. Most were of a very good quality and were just plain free. That's true even today. I felt indebted and decided that whatever course material I will prepare, it will be open and free to all. And so, here it is, at my [GitHub](#) repo: [yogeshhk/TeachingDataScience](#)

It is built primarily based on my understanding of the vast publicly available material and is with citations of the original sources wherever possible. This repo is truly Standing on the shoulders of giants.

One twist though. These are not not-ready-to-use power-point slides or pdf decks for you to download and use. They are raw sources. You need to have basic familiarity with LaTeX to compile and generate pdfs out of them!!! Clear steps are there in the README. In case you are not familiar with the whole thing (will suggest learning it anyway, its useful), do send me mail at my firstnamelastname at yahoo dot com and I will send you the requested pdf in response.

I keep on adding to the repo on a regular basis, so, if at all you are interested, then you can do the usual: follow, star, bookmark, etc.
