🚀 Wish to share my latest blog post on Medium, where I dive into Mesop, Google's new UI framework for quickly building web applications with Python. 🎉

Mesop offers high-level components for rapid prototyping and low-level elements for customization. It leverages Flask for backend operations, giving developers good control and flexibility. 🔧

Here's a quick summary of the blog:

- ✅ Customizability and Control: Mesop seems to offer more backend control compared to Streamlit and Gradio.
- ✅ In-House Development and Open Source: Initially developed by Google engineers, Mesop is now open-sourced for community collaboration.
- ✅ State Management: Built-in state handling simplifies user interaction management.
