Which technology is at the peak, right now?

The Gartner Hype Cycle suggests phases through technologies progress. It is like a roller coaster ride and has five phases.

- 1 First, the "Technology Trigger" where the idea is born.
- 2 Then comes the "Peak of Inflated Expectations," where everyone thinks it's the next big thing.
- 3 But hold on, because next is the "Trough of Disillusionment," where people realize it's not as amazing as they thought.
- 4 After that, we climb up the "Slope of Enlightenment" as we find practical uses for the technology.
- 5 Finally, we reach the "Plateau of Productivity" where it becomes a stable and widely adopted solution.

💡 The advantage is that it helps us understand the lifecycle of technologies, but the disadvantage is that it's based on subjective opinions and can be influenced by hype.

(explanation_credit = {'prompt': 'yours truly', 'response': 'chatgpt'})

? So, in your opinion, which technology is at the peak, right now? Mention that in the comments section below.

👉 Hint: if any company speaks about it in the guidance-call, its valuation jumps unbelievably 😄 (and vice-versa 😞)
