🚀 Wish to work on Generative AI Projects? 🌐

Here is an opportunity to dive into the world of chatbots and large language models (LLMs)? 🤖 ✨

I've been maintaining an open-source project called 'Sarvadnya' (at <https://lnkd.in/ddCSQy7s>), a playground for experimenting with various corpus/data types and architectures to create chatbots, mainly using LLMs. 🚀

Explore over a dozen experiments which are already there in the 'src' folder at <https://lnkd.in/dSiFapMc>.

💡 If you wish to work on such ideas, you can get involved, by:

➡️ Test out these chatbots, share your thoughts, suggest improvements, and log any issues on GitHub.

➡️ Check out existing issues at <https://lnkd.in/dJxArWz7>. Pick one, propose your solution in the comments of that issue, and once approved, contribute it via a pull request (PR).

➡️ After your PR gets merged, shout out your contributions with a snazzy video demo! 🎥 Don't forget to tag me!

💡 This is a voluntary and non-commercial effort. I don't pay you, you don't pay me – it's all about collaboration and learning! While I'm here to offer guidance, be ready to implement the solutions almost all by yourselves.

Purpose of all this to have such a platform so that others can

look at these examples, learn and build on top. Open and free to all. 🌐 ✨

Feel free to reach out if you're up for the challenge! Do comment below.
