👋 Want to decide and plan trip automatically? 🧳

Leave it to the 'Crew'... 🤝

Came across a promising new framework called 'Crew AI' that enables coordinating teams of AI agents to work together on complex tasks.

Crew AI basically provides a structure for defining specialized AI agents and granting them custom roles, goals, tools and capabilities. Agents can then autonomously divide and delegate sub-tasks between themselves. 🤖

I have built a demo Crew consisting of a Career Coach agent equipped with web search skills to find latest AI skills needed, a Writer agent for writing a LinkedIn post (not this one!!), and an Expert Writing Critique agent to proofread content. Assigned each agent complementary tasks to search, draft and refine the post. 🤝

Crew AI is still in early stages but shows massive promise in blending the conversational capabilities of frameworks like Microsoft's AutoGen. 🤖

Feel free to check out the full blog for code samples and details on my simple 3 agent demo at <https://lnkd.in/duS5drwj> 📄

Would love any feedback! 🙏
