Jumping on to the ChatGPT bandwagon ...

ChatGPT is next in the series of GPTs (Generative Pre-trained Transformers) coming from OpenAI. They are based on a revolutionary architecture called 'Transformers', initiated by Google. Transformers are based on one of the popular neural network architectures, called 'Encode-Decoder' networks, typically used for Language Modeling (predicting the next word) or Machine Translation.

Following article tries to give (without even hinting to do any fair justice) an overview of ChatGPT:
