🤖 Here is a sneak peek of my new GST (Goods and Services Tax) Query Bot, designed to tackle GST-related questions effortlessly.

🔍 The bot taps into a range of reliable data sources including official FAQ pages to fetch the most accurate information.

💡 What's behind this? Langchain for orchestration, VertexAI Palm APIs as LLM (Large Language Model), Hugging Face for embedding and FAISS for efficient vector storage.

💻 Its just a PoC (Proof of Concept) as of now. You can have a look at the code on my GitHub repo:  
`yogeshhk/Sarvadnya/tree/master/src/ask_gst`

🚀 Step-by-step explanation of the code is being made available as a Medium story. Will add link to it in comments, soon.

Feel free to share your thoughts. 🇮🇳
