Wish to share that the upcoming session in my 'LetsAI' talk series is on 'Introduction to Prompt Engineering'.

It will cover ways to unlock the power of large language models (LLMs) through effective prompting strategies. We will explore ways of crafting prompts that steer LLMs towards desired behavior.

The talk is open and free to all. Its going to be pretty non-technical, just that you should have used tools like ChatGPT, Bard/Gemini before (who hasn't?)!!

Please check the Google Calendar invite below and save it to your calendar to block the time slot and get a reminder.

<https://lnkd.in/gJvJEgxV>

Direct Google Meet call link: <https://lnkd.in/gsgkJ7NH>

Please join the call a few minutes early as Google Meet has limited seats and does not record the session. 😞

If you miss the session, you can access the slide deck on my GitHub [yogeshhk/TeachingDataScience](https://github.com/yogeshhk/TeachingDataScience) repo, in LaTeX format or email me for the PDF version to myfirstnamelastname at yahoo dot com.

The next session is tentatively planned on 1st Saturday of March

and we will have a deeper dive into 'Retrieval Augmented Generation (RAG)'. Please share your expectations about that topic in the comments.
