

Yogesh Haribhau Kulkarni • You

AI Coach (Machine Learning, Natural Language Processin...  
now • 🌐

Imagine computers writing code, making manual programming a thing of the past. Large Language language models like GPT-4, StarCoder, Codex and various Co-Pilots are leading the way.

Recently, I myself was amazed by the possibilities when ChatGPT swiftly crafted a near-perfect UI for a chatbot project.

Here are some jottings based on a talk by Dr Matt Welsh along with my personal commentary: <https://lnkd.in/d9ZXDV-H>

Dr. Welsh predicts a revolution in programming where machines write code, redefining development. The collaboration between humans and AI is the key to effective problem-solving.

Computer science education, to be imparted to all the faculties, need to emphasize AI understanding, making it more accessible. The "natural language computer" is going to change the game.

Are you ready for the new era of programming (or lack of it)?
