Starting 'Let us AI ' series with a talk on 'Introduction to Large Language Models (LLMs)' this Saturday, 27 January, 9 to 10 am India time. It is open and free for everyone.

Although the talk, in the beginning, will very briefly cover the necessary background technologies such as AI, ML, DL, and NLP, but it would be better if you already have some prior knowledge of these fields.

Please check the Google Calendar invite below and save it to your calendar to block the time slot and get a reminder.

<https://lnkd.in/dxpSZG7t>

Direct Google Meet call link: <https://lnkd.in/dqD6GsGQ>

Please join the call a few minutes early as Google Meet has limited seats and does not record the session. 😞

If you miss the session, you can access the slide deck on my GitHub [yogeshhk/TeachingDataScience](https://github.com/yogeshhk/TeachingDataScience) repo, in LaTeX format or email me for the PDF version to myfirstnamelastname at yahoo dot com.

The next session is tentatively planned for the second Saturday of February and we can either have a technical deep dive into 'Prompt Engineering' or 'How LLMs Work?' i.e. the Transformer Architecture. Which one would you like? Please share your

preference in the comments.
