🚀 If I have to summarize (almost all) the consultancy requests that come my way, it is: Do whatever, but get GenAI/LLM/ChatGPT added to our product/services 🗣️ 🤖

You must already be feeling the same heat (or fever) as well, right? 💡

And why not? the reason is corroborated by Gartner's Hype Cycle for Artificial Intelligence 2023 (<https://lnkd.in/dv5ucv2z>).

As you can see, 'Generative AI' is at the PEAK OF INFLATED EXPECTATIONS. And the way to interpret the pale-blue dot for it is, that this technology will plateau/mature in the next 2-5 years. That means, its not Mature yet. ⌚

For relatively trivial tasks like writing mundane emails, blogs, tweets, its ok, rather wonderful, and even for generating cool-fancy images. 📧 ✍️ 🖼️ But for some serious business (if yours is by any stretch of imagination, like Legal, Financial, Medical, etc.) there is still some time. 🌐 ⚠️

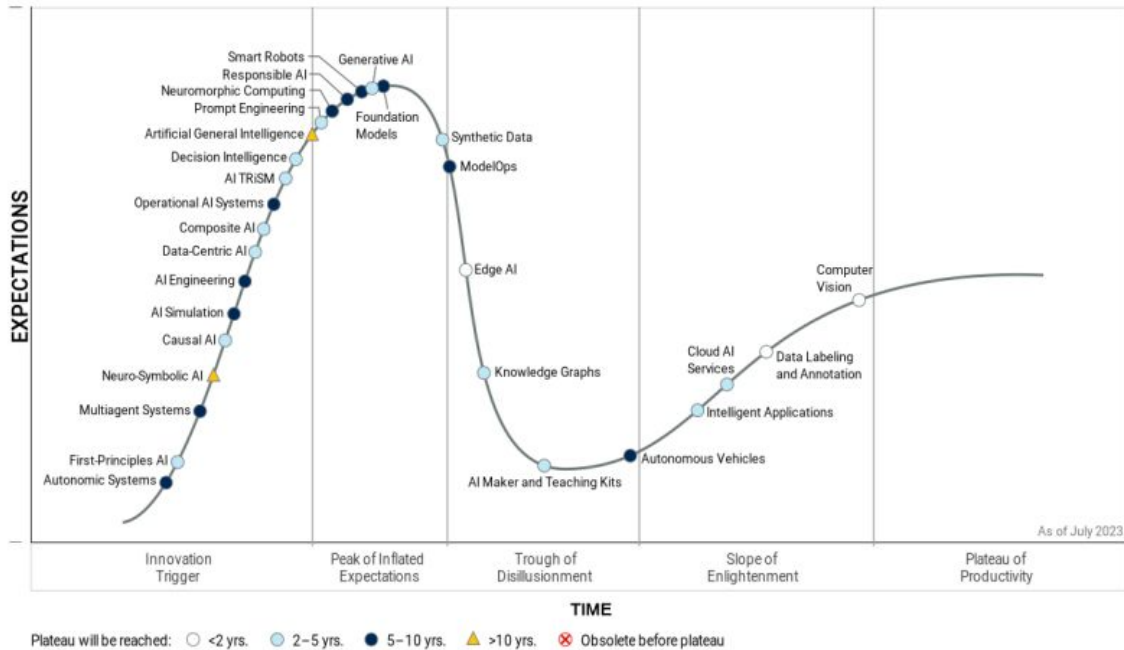

Don't believe? Test it yourself, with your existing regression suite. Try the 'Top' Open Source models also and let me know.

My conclusion at the point is: Hybrid is the way to go!! 💡 🤝 and traditional ML/DL/NLP is not going anywhere. 🚀
