🚀 For anyone wanting to do some serious GenAI/LLM-based application development, here's a Trilogy to master, what I call 'DLL':

Docling

LangChain

LangGraph

Here's how they fit in:

- ✅ Docling: for multimodal document parsing
- ✅ LangChain: for RAG and agent development
- ✅ LangGraph: for agentic workflow automation

These frameworks are especially suitable if you're an individual or part of a small-midsize corporate, with limited access to high-end computing or cloud platforms,

I'm planning to conduct a few awareness sessions at public conferences:

 LangGraph was already covered in October at [#AgentConPune2025](#)

Docling session is likely coming up in November (DevFest Pune 2025)

LangChain talk is planned for December (Pune DevCon 2025)

If there's enough commercial interest, I'll also be running a hands-on workshop series called "Zero to Hero", starting in 2026.

Each topic will get a 2–4 hour deep-dive on Saturday mornings over three weekends, followed by a capstone project on the fourth Saturday.

These sessions are meant for hands-on developers, not management or marketing teams.

If your company wants to host this for your employees, or you'd like to include it as part of a full-day conference, feel free to reach out at yogeshkulkarni [at] yahoo [dot] com
