🔍 Repos are all I have (for you all) 🔍

Throughout my journey as a Data Science Instructor, consultant, and now AI Coach, I've been committed to open-sourcing my content on GitHub. The intent behind this has always been to give back, pay it forward, and follow in the footsteps of those who selflessly shared their knowledge with me.

The reason I call it 'open-source' is that:

- ♦ everything is open and free to access. There are no copyrights, only copy-lefts, and
- ♦ most of my training content is developed using LaTeX. I write presentation material in text form, including formatting instructions, and then LaTeX compiles it into slide decks or reference cards.

Now, two important points to consider here:

- ♦ first, the presentations are not in ready-to-use slides, so you'll need to put in some effort to compile them (but trust me, it's worth it!); and
- ♦ second, you are completely free to edit the content, adjust it to your needs, or even add your name and make it your own.

Here are some of the repositories you can find at <https://lnkd.in/dFJQEC4z>:

- ♦ TeachingDataScience: My own notes and slides for Data Science related topics, all prepared in LaTeX.
- ♦ TheNatureOfCode: Python implementations of the book

'The Nature of Code' by Daniel Shiffman.

- ◆ GSTFAQChatbot: A chatbot designed to answer FAQs about Goods and Services Tax (GST) in India.
- ◆ Publications: A collection of my articles, blogs, book summaries, sketchnotes, papers, and more.
- ◆ MiningResume: A simple program for Text Mining certain fields from a resume.
- ◆ MidcurveNN: Computation of Midcurve of Thin Polygons using Neural Networks, an extension of my PhD topic.
- ◆ FAQChatbot: A Simple Question-Answer (atomic query) based chatbot framework.
- ◆ YogShastra: My compilation of understandings from readings and watchings on various topics related to Yoga.
- ◆ Sarvadnya: LLM based custom chatbot PoCs.

Feel free to explore, use, and contribute to these repositories. If you find them useful, I'd love to hear your feedback!
