Got a brilliant idea or a solution to a pressing problem? 💡

Before diving in, it's smart to check if someone else has already tackled it and see what insights they've uncovered. This process, often called a state-of-the-art review or literature review, helps you build on existing knowledge rather than starting from scratch.

Example Question: "What should be the playbook for transitioning professionals to professors?" (This was relevant to my other effort called "Vidya Setu")

A quick Google search might give you generic and surface-level answers. Why? Because it's pulling from the *entire* internet, not specialized sources. But there's a better way to dig deeper! 🕵️

Tools for Your Research:

1 SciSpace or Elicit (Free Basic Account)

- Discover relevant and highly-cited research papers for your query.

- Download the papers from platforms like Google Scholar, ResearchGate, or Semantic Scholar.

2 NotebookLM by Google (Free with limits)

- Upload the PDFs into a Notebook.

- Generate brief summaries, highlights, or even audio reviews of the documents.

- Interact with your research via the built-in chat to ask specific questions and get targeted insights.

Curious to see how this works? Check out my findings for the example question on GitHub: yogeshhk: VidyaSetu/Admin/https://lnkd.in/dRH6CQMy (screenshot below)

Takeaway: Don't settle for "average" search results. Use specialized tools to focus your research and uncover meaningful insights. ✨
