Ever wanted to learn Python but felt it was too late, too hard, or only for “tech people”? Let us bust that myth. 🔄 😊

Pune AI Community (PAIC) LetsAI is kicking off the Python Programming Series with Part 1: Python Basics, a session designed for absolute beginners.

In this session, [Anjali Kulkarni](#) will walk you through Python fundamentals in a simple, no pressure way, starting with data types like integers, strings, lists, and dictionaries, then moving into conditional statements and loops, the building blocks behind real world logic and automation.

Why Python? Because it is one of the most beginner friendly languages and also the backbone of AI, data science, automation, and modern software. Learning Python today is like learning basic computer literacy for tomorrow.

Event details:

PAIC LetsAI: Python Programming Series

Part 1: Basics

17 January 2026

15:00 to 17:00 IST

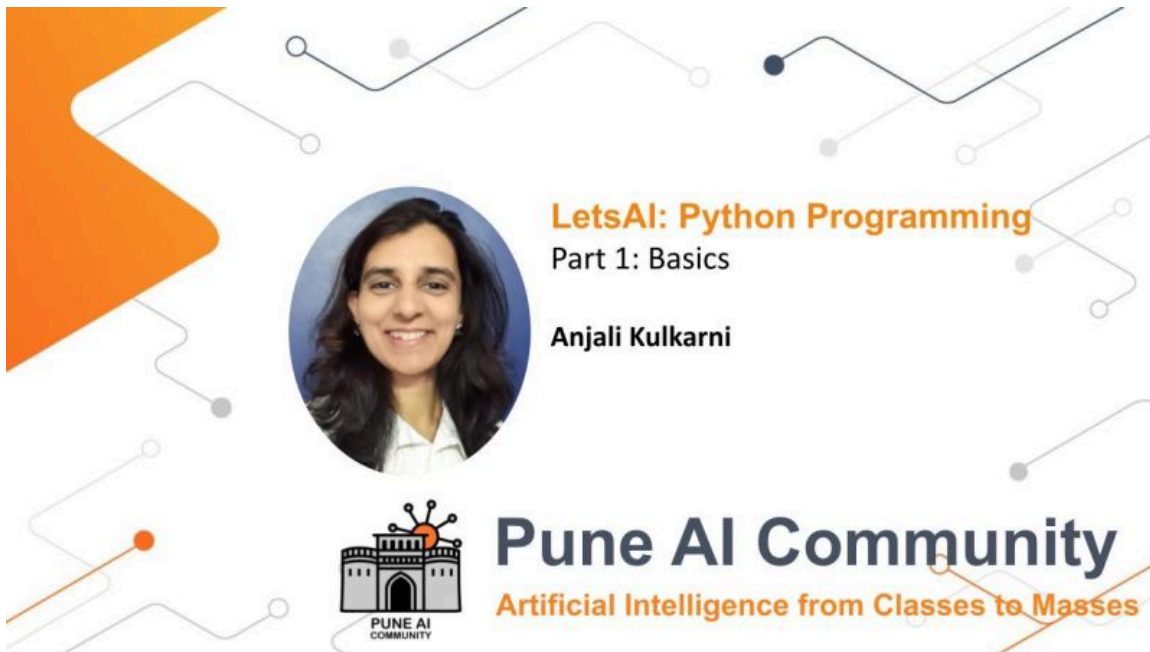

✅ Open and free to all

🎥 Sessions will be recorded

Registration link: <https://luma.com/51ddpb3p>

Join in, learn the basics, and take the first confident step into the AI powered world. 🚀 🔄
