

FROM ZERO TO CHATGPT!!

Yogesh Kulkarni

From Zero to GPT!!

“Houston, we have a problem!!”

Whats the Problem?

- ▶ Along with some softer words like “disruption”, “passionate”, “excited” . . .
- ▶ If you don't have word “innovation” in your talk/speech/conversation it's BIG problem.
- ▶ Irrespective of fields. You can be Corporate, Political, Social, etc.

And there is an addition of one more word, which is a must in every talk...and that is?

“AI”

The Problem

Every company is claiming to be working in AI-ML

- ▶ Is it really so?
- ▶ What exactly is AI (ML)?
- ▶ What is not AI?

Or is it just a plain BIG hype?

What is the Core Idea?

What's the core idea?

- ▶ behind problem solving?
- ▶ behind writing software algorithms?
- ▶ solving research problems?

Desire

- ▶ To find a “function”
- ▶ To find a relation
- ▶ To find a transformation
- ▶ To build a model
- ▶ From given inputs to desired outputs.

That's it.

Functions

- ▶ But most real-life functions are not deterministic
- ▶ Some are probabilistic, some non-linear.
- ▶ *“Detecting if the tumor is benign or malignant”*
- ▶ *“At any state in the game of chess, what's the next move?”*

Chess: next move?

- ▶ Needs extreme expertise
- ▶ Needs “intelligence”
- ▶ How do you get that?
 - ▶ Built by lots of training.
 - ▶ By studying lots of past games.
- ▶ This is how Humans build intelligence

Intelligence

- ▶ Can machine (software/program) also do the same?
- ▶ Can it play chess?
- ▶ Can it build intelligence?
- ▶ By looking at past experiences (data),
- ▶ Training Data: games played, moves used, etc.

Yes, it can!! Thats Artificial Intelligence.

Relationship between AI, ML, DL

(Ref: <https://blogs.nvidia.com/blog/2016/07/29/whats-difference-artificial-intelligence-machine-learning-deep-learning-ai/>)

What is AI-ML-DL?

- ▶ Artificial Intelligence: mimicking human intelligence
- ▶ Machine Learning: Automating Learning with features.
- ▶ ML: human-designed representations and input features. So, its just optimizing weights to best make a final prediction
- ▶ There could be programmed (hand coded) AI, that's not Machine Learning
- ▶ Machine Learning could be for non AI activities, like automation
- ▶ Deep Learning: Neural network with no input features

Introduction to Machine Learning

How do we learn?

- ▶ What do we do when we have to prepare for an examination?
- ▶ Study. Learn. Imbibe. Take notes. Practice mock papers.
- ▶ Thus, prepare for the unseen test.
- ▶ Machine Learning does the same.

What is Machine Learning?

Machine learning is a type of artificial intelligence (AI) which:

- ▶ Learns function without being explicitly programmed.
- ▶ Can grow and change when exposed to new data.

Model entities

For $income = c + \beta_0 \times education + \beta_1 \times experience$

- ▶ Inputs: Education and experience, also called as features or attributes or dimensions or variables.
- ▶ Mathematical entities added to input data, are Parameters.. β_0 and β_1 are parameters
- ▶ Income is target, also called as outcome or class.

Traditional vs. Machine Learning?

Traditional Programming

Machine Learning

Why Machine Learning?

- ▶ Problems with High Dimensionality
- ▶ Hard/Expensive to program manually
- ▶ Techniques to model 'ANY' function given 'ENOUGH' data.
- ▶ Job \$\$\$

ML vs DL: What's the difference?

Deep learning algorithms attempt to learn (multiple levels of) representation by using a hierarchy of multiple layers

(Reference: <https://www.xenonstack.com/blog/static/public/uploads/media/machine-learning-vs-deep-learning.png>)

Use Deep Learning When ...

- ▶ You have lots of data (about 10k+ examples)
- ▶ The problem is “complex” - speech, vision, natural language
- ▶ The data is unstructured
- ▶ You need the absolute “best” model

(Ref: Introduction to TensorFlow 2.0 - Brad Miro)

What is Deep NLP

- ▶ Green part is NLP (rule based, linguistic)
- ▶ Blue part is Deep Learning not applied to NLP
- ▶ Purple is Deep NLP (DNLP), NN applied for NLP use cases
- ▶ Seq2Seq is heavily used technique of DNLP for sequence to sequence modeling, eg Translation, Q & A, etc.

Typical Machine Learning Classification

- ▶ Questions are converted to bag of words (a vocab long vector, having frequency of specific words at their places)
- ▶ Each question thus gets converted to fixed size vector, which acts as list of features.
- ▶ In training, weights are computed based on the given target.
- ▶ Once model is ready, it is able to answer Yes or No to the question.

Hello Kirill. Checking if you are back to Oz. Let me know if you are around ... Cheers, V

(Ref: Deep Learning and NLP A-Z - Kirill Eremenko)

Context

Representing words by their context

- Distributional semantics: A word's meaning is given by the words that frequently appear close-by
 - “*You shall know a word by the company it keeps*” (J. R. Firth 1957)
 - One of the most successful ideas of modern statistical NLP!
- When a word w appears in a text, its **context** is the set of words that appear nearby (within a fixed-size window).
- Use the many contexts of w to build up a representation of w

...government debt problems turning into **banking** crises as happened in 2009...

...saying that Europe needs unified **banking** regulation to replace the hodgepodge...

...India has just given its **banking** system a shot in the arm...

These **context words** will represent **banking**

Word vectors

- ▶ Dense vector for each word
- ▶ Called distributed representation, word embeddings or word representations
- ▶ Test: similar to vectors of words that appear in similar contexts

$$\text{banking} = \begin{pmatrix} 0.286 \\ 0.792 \\ -0.177 \\ -0.107 \\ 0.109 \\ -0.542 \\ 0.349 \\ 0.271 \end{pmatrix}$$

Seq2Seq architecture

Image Source: karpathy.github.io

(Ref: Deep Learning and NLP A-Z - Kirill Eremenko)

For Seq2seq last 2 options are possible. We are going ahead with the 2nd last.
Last one has fixed input and same size output.

Seq2Seq architecture

Hello Kirill, Checking if you are back to Oz.

(Ref: Deep Learning and NLP A-Z - Kirill Eremenko)

During training, Encoder is fed with Questions and decoder with Answers. Weights in gates, hidden states get settled. During testing for each sequence of input, encoder results in to a combo vector. Decoder takes this and starts spitting out words one by one, probabilistically.

Popularity

Masking the future in self-attention

Transformers

- ▶ The Transformer is a model that uses attention to boost the speed with which seq2seq with attention models can be trained. The biggest benefit, however, comes from how The Transformer lends itself to parallelization.
- ▶ In its heart it contains an encoding component, a decoding component, and connections between them.

GPT

Generative Pretrained Transformer (GPT)

2018's GPT was a big success in pretraining a decoder!

- ▶ Transformer decoder with 12 layers.
- ▶ 768-dimensional hidden states, 3072-dimensional feed-forward hidden layers.
- ▶ Trained on BooksCorpus: over 7000 unique books.
- ▶ Contains long spans of contiguous text, for learning long-distance dependencies.
- ▶ The acronym “GPT” never showed up in the original paper; it could stand for
- ▶ “Generative PreTraining” or “Generative Pretrained Transformer”

(Ref: John Hewitt, Radford et al., 2018)

GPT-3, in-context learning, very large models

- ▶ Very large language models seem to perform some kind of learning without gradient steps simply from examples you provide within their contexts.
- ▶ GPT-3 is the canonical example of this. The largest T5 model had 11 billion parameters.
- ▶ GPT-3 has 175 billion parameters.

(Ref: John Hewitt)

Overview of ChatGPT

What is ChatGPT?

- ▶ A Chatbot
- ▶ A language model, that takes 'prompt' from user and generates a response.
- ▶ Built by OpenAI and released in Nov 2022
- ▶ Got 1m users in 5 days (Insta 2.5 months, Spotify 5m, Facebook 10m, Netflix 3.5yrs)
- ▶ Link: <https://chat.openai.com/chat>
- ▶ Details: <https://openai.com/blog/chatgpt/>

(Ref: OpenAI, creator of ChatGPT, casts spell on Microsoft - The Jakarta Post

What is a Language Models?

- ▶ While typing SMS, have you seen it suggests next word?
- ▶ While typing email, have you seen next few words are suggested?
- ▶ How does it suggest? (suggestions are not random, right?)
- ▶ In the past, for "Lets go for a ... ", if you have typed 'coffee' 15 times, 'movie' say 4 times, then it learns that. Machine/Statistical Learning.
- ▶ Next time, when you type "Lets go for a ", what will be suggested? why?
- ▶ This is called Language Model. Predicting the next word. When done continuously, one after other, it spits sentence, called Generative Model.

Next word prediction using language modeling in keyboards(Mandar Deshpande)

Evolution of Language Models

Language Models can be statistical (frequency based) or Machine/Deep Learning (supervised) based. Simple to complex.

(Ref: Analytics Vidhya <https://editor.analyticsvidhya.com/uploads/59483evolution.of.NLP.png>)

Large Language Models - Comparison

(Ref: Deus.ai <https://www.deus.ai/post/gpt-3-what-is-all-the-excitement-about>)

Open AI: Who are these guys?

- ▶ San Francisco-based artificial intelligence company
- ▶ Famous for its well-known DALL-E, generates images from prompts.
- ▶ Initially supported by Elon Musk
- ▶ The CEO is Sam Altman, who previously was president of Y Combinator.
- ▶ Microsoft is a partner and investor.
- ▶ Mission: To ensure that artificial general intelligence benefits all of humanity. Prevent misuse of AI

OpenAI Founded

The company was founded with the goal of developing and promoting friendly AI in a responsible way, with a focus on transparency and open research.

(Ref: <https://www.slideegg.com/open-ai-chat-gpt>)

GPTs Trainings

- ▶ GPT-1 is pre-trained on the BooksCorpus dataset, containing 7000 books amounting to 5GB of data
- ▶ GPT-2 is pre-trained using the WebText dataset which is a more diverse set of internet data containing 8M documents for about 40 GB of data
- ▶ GPT-3 uses an expanded version of the WebText dataset, two internet-based books corpora that are not disclosed and the English-language Wikipedia which constituted 600 GB (45TB?) of data

GPT3 vs ChatGPT

	GPT-3	ChatGPT
Training Parameters	175 billion	175 Billion RLHF Technique Human conversational text
Designed For	NLP Tasks	Chatbot apps
Content Retention Ability	No	Yes
Use Cases	Creative Writing, Business Writing, Ads, Translation, Summarization, Data Analysis	Customer Service, Data Analysis, Blogging, Copywriting, Coding, Debugging, etc.

(Ref:ChatGPT Explained: Complete A-Z Guide - Kripesh Adwani)

Step 1

- ▶ Have a prompts dataset
- ▶ Let human laborer get the correct response for them
- ▶ Do fine-tuning of GPT 3.5 using this data via supervised learning (SFT).
- ▶ Simple but very expensive.

STEP 1

Collect demonstration data and train a supervised policy

A prompt is sampled from our prompt dataset

Explain reinforcement learning to a 6-year-old

A labeler demonstrates the desired output behavior

We give treats and punishments to teach...

This data is used to fine-tune GPT-3.5 with supervised learning.

SFT

(Ref: ChatGPT: training process, advantages, and limitations - By Sergio Soage, Machine Learning Engineer at Aivo)

Step 2

- ▶ For a prompt, generate multiple responses from the fine-tuned model, one after another.
- ▶ Human feedback provides a ranking of responses
- ▶ This data is used to build Rewards Model (RM)

STEP 2

Collect comparison data and train a reward model

(Ref: ChatGPT: training process, advantages, and limitations - By Sergio Soage, Machine Learning Engineer at Aivo)

Step 3

- ▶ Take unseen prompt. Pass it through Proximal Policy Optimization (PPO) model which has been initialized with SFT. It generates a response (ie inferencing via SFT).
- ▶ Calculate reward for that response via RM model. This reward is used to update the PPO model (loss function, back-propagation)

STEP 3

**Optimize a policy against the reward model
using the PPO reinforcement learning algorithm**

(Ref: ChatGPT: training process, advantages, and limitations - By Sergio Soage, Machine Learning Engineer at Aivo)

As a Python Program?

Pip install openai library, have KEY from your own account and then try various APIs available

The screenshot shows a code editor with a Python file named `main.py`. The code imports the `openai` library and uses an API key. It defines a prompt and creates a completion response using the `text-davinci-001` engine. The response is then printed.

```
main.py x
main.py > ...
1 import openai
2 from api_secrets import API_KEY
3
4 openai.api_key = API_KEY
5
6 prompt = "Say this is a test"
7
8 response = openai.Completion.create(engine="text-davinci-001", prompt=prompt, max_tokens=6)
9
10 print(response)
11
```

Below the code editor, the JSON output of the response is displayed. The output shows a single choice with a length of 6 characters, index 0, and the text "This is a test".

```
{ "choices": [ { "finish_reason": "length", "index": 0, "logprobs": null, "text": "\n\nThis is a test" } ], "created": 1645006687, "id": "cmpl-4CBfrIH6uu0ZDSJ0sBdI7RXhPeKr", }
```

(Ref: Getting Started with OpenAI API and GPT-3 -Assembly AI)

Applications

Explain Complex Subjects

What is neuroscience?

Neuroscience is the scientific study of the nervous system, which includes the brain, spinal cord, and peripheral nerves. It is a multidisciplinary field that combines knowledge from biology, chemistry, physics, psychology, and other fields to understand how the nervous system works and how it relates to behavior and cognition. Researchers in neuroscience use a variety of methods, including neuroanatomy, neurophysiology, and neuroimaging, to study the structure and function of the nervous system.

(Ref: Top 10 Chat GPT Use Cases - Simplilearn)

Write Code

The screenshot shows a conversational interface. The user asks for a machine learning sample program for stocks prediction. The AI responds with a Python code snippet using scikit-learn's LinearRegression and train_test_split modules to predict stock prices based on historical data.

```
import numpy as np
from sklearn.linear_model import LinearRegression
from sklearn.model_selection import train_test_split

# Load stock data
stock_prices = np.genfromtxt('
■
```

it was still writing but I stopped it, just to show this pic

(Ref: Top 10 Chat GPT Use Cases - Simplilearn)

Debug Code

```
arr[j + 1] = tempp;
```

It should be:

 Copy code

```
arr[j + 1] = temp;
```

You have an extra "p" in the variable name, `tempp`, which is causing a compile error. This is because "temp" is the variable that you declared earlier to store the value of the current element, whereas "tempp" is not a variable that has been declared.

This error is causing the code not to run. Once you fix this issue, the code should work correctly and sort the array in ascending

(Ref: Top 10 Chat GPT Use Cases - Simplilearn)

Get Custom Marketing Strategy

How should i promote my youtube videos on social media?

Promoting your YouTube videos on social media can be a great way to increase views and engagement. Here are a few strategies you can use:

1. Share your videos on your personal social media accounts. This includes your Facebook, Twitter, Instagram, and other accounts where you have a following. Encourage your friends, family and followers to share the video with their own networks.
2. Join relevant communities and groups on social media. For example, if you're making cooking videos, join Facebook groups and Reddit communities dedicated to cooking. Share your videos with the group and engage with the community.
3. Use social media ads. Platforms like Facebook, Instagram, and Twitter allow you to create targeted ads that promote your videos

(Ref: Top 10 Chat GPT Use Cases - Simplilearn)

Write Articles

Write an article on machine learning in 500 words

Machine learning is a rapidly growing field that is transforming the way we live and work. It is a branch of artificial intelligence that allows computers to learn from data, without being explicitly programmed. Machine learning is changing the way we interact with technology and has the potential to revolutionize many industries, including healthcare, finance, transportation, and more.

The basic idea behind machine learning is that computers can learn from data, without being explicitly programmed. This is done by feeding a computer large amounts of data and allowing it to find patterns and make predictions. There are three main types of machine learning: supervised learning, unsupervised learning, and reinforcement learning.

Supervised learning is the most common type of machine learning. It involves training a computer on a labeled dataset, where the desired output is ■

Summarize Book

summarize the book Gullivers travels

Gulliver's Travels is a satirical novel written by Jonathan Swift in 1726. The book tells the story of Lemuel Gulliver, a ship's surgeon who becomes shipwrecked and ends up on a series of strange and fantastical islands. The novel is divided into four parts, each of which tells the story of Gulliver's travels to a different island.

In Part 1, Gulliver washes up on the island of Lilliput, where he encounters a race of tiny people who are locked in a bitter war with their neighboring island of Blefuscus. Gulliver becomes embroiled in the politics of the island and ultimately helps the Lilliputians defeat the Blefuscudians.

In Part 2, Gulliver travels to the island of Brobdingnag, where he encounters a race of giants. He is initially treated kindly by ■

Answer Interview Questions

How to answer the interviewer what is your weakness

When answering this question, it is best to be honest, but also to frame your answer in a positive way. For example, you could say something like: "I have a tendency to be a perfectionist and sometimes struggle with delegating tasks. However, I have been working on this by learning to trust my team members and giving them more responsibility." This shows that you are aware of your weakness and actively working to improve it.

(Ref: Top 10 Chat GPT Use Cases - Simplilearn)

Develop Apps

I want to write an android app that shows me 50 stock prices as a list from yahoo API. How can i do it?

To write an Android app that shows a list of 50 stock prices from the Yahoo API, you will need to do the following:

1. Create a new Android project using Android Studio or another development environment.
2. Register for a Yahoo API key, which will allow you to access financial data such as stock prices.
3. Use the Retrofit library to make API calls to the Yahoo API. You can use the Retrofit library to create an interface that defines the API endpoints, and then use this interface to make API calls.

Create Health Plan

My weight is 95 kg and I want to loose it. create 7 days plan excercise and diet planfor it.

Here is a 7-day exercise and diet plan that can help you lose weight:

Day 1:

- Exercise: 30-minute brisk walk or jog
- Diet: Start your day with a healthy breakfast of oatmeal, berries, and a boiled egg. For lunch, have a salad with grilled chicken or fish. For dinner, have grilled vegetables and a small serving of lean protein.

Day 2:

- Exercise: 45-minute circuit training routine that includes bodyweight exercises such as push-ups, ■

Answer General Knowledge Questions

Who invented the first printer?

The first printer was invented by a German goldsmith named Johannes Gutenberg in the 15th century. He developed a printing press that used movable type, which made it possible to print books and other documents quickly and cheaply. The Gutenberg press used metal movable type, which was set into a wooden form and inked, then pressed onto paper. This invention revolutionized the way information was disseminated and made the mass production of books possible.

Gutenberg's invention of the printing press is widely regarded as one of the most important events in the second millennium, it is considered the most important invention of the second millennium, after the invention of the wheel.

(Ref: Top 10 Chat GPT Use Cases - Simplilearn)

HVAC QnA

Prompt: "Diagnose a frosted evaporator coil"

Result: "There are several reasons why an evaporator coil may become frosted:

- ▶ Low refrigerant levels: If the refrigerant levels in the system are too low, it can cause the evaporator coil to freeze. This is because the refrigerant is responsible for absorbing heat from the air, and without enough refrigerant, the coil will not be able to absorb enough heat to prevent freezing.
- ▶ Dirty air filter: A dirty air filter can restrict airflow to the evaporator coil, causing the coil to freeze.
- ▶ Blocked or restricted airflow: If the airflow to the evaporator coil is blocked or restricted, the coil may freeze. This can be caused by a number of things such as dirty ducts or registers, closed or blocked vents, or a malfunctioning blower fan.
- ▶ Obstruction in the drain line: A blockage in the drain line can cause water to back up and freeze on the coil.

It's important to fix the issue as soon as possible, as a frozen evaporator coil can lead to decreased efficiency and can cause damage to the unit. "

(Ref:ChatGPT Could Be the 'Write' Choice for HVACR Contractors - Joanna R. Turpin)

HVAC QnA

Prompt: "How to respond to a customer who thinks an air conditioner is too expensive"

Result: "

- ▶ Understand their concerns: Find out why they think the air conditioner is too expensive. Are they comparing it to a lower-quality unit? Are they on a tight budget? Understanding their concerns will help you address them more effectively.
 - ▶ Provide a detailed explanation of the costs: Explain the costs associated with the air conditioner, including the cost of the unit, installation, and any additional materials or labor that may be required.
 - ▶ Compare costs with the benefits: Explain the benefits of the air conditioner, such as energy efficiency, durability, and long-term cost savings. Explain how the cost of the unit may be offset by energy savings in the long run.
 - ▶ Offer financing options: If the customer is unable to afford the air conditioner upfront, offer financing options that can help them spread the cost over time.
- ...

(Ref: ChatGPT Could Be the 'Write' Choice for HVACR Contractors - Joanna R. Turpin)

...

- ▶ Provide a written estimate: Provide the customer with a detailed, written estimate that outlines the costs associated with the air conditioner and the benefits it will provide. This will help them make an informed decision.
- ▶ Provide a guarantee or warranty on the unit: Provide the customer with a guarantee or warranty on the unit to give them peace of mind in their investment.
- ▶ Provide an alternative solution: If the customer cannot afford the recommended solution, offer an alternative solution that fits their budget while still meeting their needs.

It's important to be patient, understanding and provide all the information customers need to make a decision that best fits their needs and budget. "

(Ref:ChatGPT Could Be the 'Write' Choice for HVACR Contractors - Joanna R. Turpin)

If This Then That

- ▶ With well designed prompts, one can format output in json (read, key-value pairs)
- ▶ Parsing via python program, one can trigger Actions. (GPT3 APIs for now)
- ▶ Whole pipeline can be put in place programmatically, doing any trigger based work (IFTTT - If This Then That)

(Ref: ChatGPT for Arduino - MoonPreneur)

Conclusions

Advantages

- ▶ Conversational Abilities
- ▶ Solving Complex Problems
- ▶ Retaining Previous Information
- ▶ Will replace mundane language tasks, How to articles, homeworks, etc

Dis-advantages

- ▶ Sensitive to Input Phrasing
- ▶ Cannot replace humans for innovation, for which data does not exist already
- ▶ Keeps “hallucinating”: Tends to write plausible but incorrect content with confidence
- ▶ May not get language structure right all the time, e.g try getting ghazal written

My Sketchnote

(Ref: <https://medium.com/technology-hits/overview-of-chatgpt-95f4b43645c0>)

The After-shocks

ChatGPT vs Google: Who is better?

Google: almost latest data, gives source, not trainable, looks more accurate

ChatGPT: a bit old data, no source, trainable, hallucinates

(Ref: ChatGPT Explained: Complete A-Z Guide - Kripesh Adwani)

Will ChatGPT Kill Jobs?

Repetitive, boring and standard, language based jobs, for sure. Need to be more creative, experiential to stand against ChatGPT.

(Ref:ChatGPT Explained: Complete A-Z Guide - Kripesh Adwani)

New Job Roles?

Prompt Engineer: Preparing input to AI effectively to get the desired answer.
Will need to AI works in the background plus domain knowledge. Give context, examples etc to prime the model to give short specific answers than the usual page-long ones (davinci GPT3 in this case)

The screenshot shows the ChatGPT playground interface. At the top, there's a navigation bar with tabs for "Playground", "Q&A" (which is selected), "Save", "View code", "Share", and an ellipsis. The main area is a conversation window where the AI has responded to several questions. On the right side, there are configuration settings for the AI's responses.

Mode: Set to "text-davinci-003".

Model: Set to "text-davinci-003".

Temperature: Set to 0.

Maximum length: Set to 100.

Stop sequences: An empty input field with placeholder text "Enter sequence and press Tab".

Top P: Set to 1.

Frequency penalty: Set to 0.

Presence penalty: Set to 0.

Below the configuration panel, there are two small icons: a yellow thumbs-up and a red thumbs-down, each with a count of 7.

Conversation history:

- I am a highly intelligent question answering bot. If you ask me a question that is rooted in truth, I will give you the answer. If you ask me a question that is nonsense, trickery, or has no clear answer, I will respond with "Unknown".
- Q: What is human life expectancy in the United States?
A: Human life expectancy in the United States is 78 years.
- Q: Who was president of the United States in 1955?
A: Dwight D. Eisenhower was president of the United States in 1955.
- Q: Which party did he belong to?
A: He belonged to the Republican Party.
- Q: What is the square root of banana?
A: Unknown
- Q: How does a telescope work?
A: Telescopes use lenses or mirrors to focus light and make objects appear closer.
- Q: Where were the 1992 Olympics held?
A: The 1992 Olympics were held in Barcelona, Spain.
