Wish to share that my Marathi article “एआयविषयी धोरणात्मक पंचसूत्री” has been published in [Sakal Media Group](#) .

The article explores India's practical and ground-up approach to Artificial Intelligence, as articulated by Hon. Minister [Ashwini Vaishnaw](#).

Instead of chasing hype, India is building a complete AI ecosystem through five interconnected layers:

- ➡ Applications: AI solutions that directly impact people's lives, from agriculture and healthcare to education and governance.
- ➡ Models: Efficient, mid-sized AI models designed to solve real-world problems rather than just showcase scale.
- ➡ Chips & Compute: Democratized access to high-performance computing through public-private partnerships, lowering costs and barriers.
- ➡ Data Centers: Massive investments strengthening digital infrastructure, data sovereignty, and high-value job creation.
- ➡ Energy: Reliable and clean power, including nuclear energy, to support always-on AI systems.

What stands out is the focus on economics, accessibility, and population-scale adoption, not prestige or size alone. AI, in this vision, becomes a national capability rather than an elite tool.

Grateful to [Sakal Media Group](#) for publishing the article and enabling this important conversation on India's AI future.
