Before You Start Your AI Project

Ask these simple questions first

Is it a real pain point?

Will someone care enough to pay for it or urgently want it solved?

Do we really need AI here?

Rule-based or traditional methods might work better

What exists today?

Study current solutions and find the gaps worth solving

Do we have data and compute?

No data means no AI. Skills and infra matter too.

Check Research

For academics, start with
recent papers & benchmarks

Let us test your awareness!

Pick a domain and match problems to Rule-based, ML, DL, LLM, VLM, etc
