AI on Your Phone, No Internet Needed! 🚀

Imagine running AI models directly on your smartphone, completely offline, and absolutely free. That's what Google's AI Edge Gallery offers! This is an official app. Use AI locally, ensuring speed and privacy. 🌐 ✨

It is multi-modal, handling text, images for now and audio, etc later. Uses Gemma 3, optimized specifically for mobile.

You can do Q&A, reasoning, and generative AI tasks in over 140 languages. 🌍

Google is back in the game now, I feel. Check out my sample usage, below!

$(x+3)^2 = 4$

You

how to solve for x?

Model on CPU

Here's how to solve the equation $(x + 3)^2 = 4$ for x:

1. **Take the square root of both sides:**
   $\sqrt{(x + 3)^2} = \pm\sqrt{4}$ x + 3 = ±2

2. **Solve for x in each case:**
   ○ x + 3 = 2 => x = 2 - 3 => x = -1
   ○ x + 3 = -2 => x = -2 - 3 => x = -5

Therefore, the solutions for x are **-1 and -5**.

Alternatively, you can expand the equation first:

$(x + 3)^2 = 4$ $x^2 + 6x + 9 = 4$ $x^2 + 6x + 5 = 0$

Then you can use the quadratic formula:

$x = (-b \pm \sqrt{(b^2 - 4ac)}) / 2a$ $x = (-6 \pm \sqrt{(6^2 -$
