For those who are interested in developing teaching content for Tensorflow 2.0...

Over a last few years I have prepared course material for teaching Python, Machine Learning, Natural Language Processing, etc. For the benefit of a larger community, it has been open sourced, to be used freely, by anyone, at no cost!!

Its at https://lnkd.in/fxr938h

The next plan is to further develop Deep Learning content. I already have some content in place. The current Tensorflow (https://lnkd.in/f8KDZYd) slides are based on version 1. As version 2.0 is a big revamp, will need to almost re-develop the Tensorflow 2.0 content, .

Would love your contributions here, to start with. All voluntary, without any monetary benefit.

You would need good familiarity with LaTeX (https://lnkd.in/fqbESZN) to develop and compile source files into pdf.

If you are interested in writing LaTeX slides for Tensorflow 2.0, do let me know at firstnamelastname at yahoo dot com. Put email subject as "TeachingDataScience".
