In distributed systems, you can choose only two out of {Consistency, Availability and Partition tolerance} (CAP); the third gets chosen automatically.

In project management, you can choose only two out of {Scope, Time and Quality} (STQ); the third one gets chosen automatically.

In career, I guess, you can choose only two out of {Fame, Fortune and Freedom} (FFF); the third one gets chosen automatically.

Right?

In the same vein, but with a bit different take, here is a short article by Shaunta Grimes, on FFF:
https://lnkd.in/dnEmVitN

#career #midcareerchange #job #hiring #fortune #money #freedom #projectmanagement #quality

Fame. Fortune. Freedom. What Drives You?

Hmmmm..... But I'm afraid what people are overlooking is that FFF is over a large part of a lifetime, unlike the CAP theorem (a trade-off at a point in time). So one can go for each of the Fs over time. AND then there is the small matter of obliquity.
