🌟 Has anyone successfully instruct-fine-tuned small or large language models entirely on a CPU (i.e., no Google Colab, Kaggle kernels, or likes)? 🤨

💡 Key Questions:

➡️ Which models worked for you? (BERT family, models under 1B parameters, etc.)

➡️ Which framework did you use? 🤖 (Hugging Face with PEFT/LoRA, Predibase Ludwig, Unsloth AI, or others?)

Feel free to share your experiences and insights in the comments! 💬
