Suddenly every app is calling itself an "AI Agent" 🤖 But this is more than marketing. What's the diff?

- ➔ A chatbot mainly answers questions.
- ➔ An AI Agent plans, uses tools, retries, and completes tasks.

Same LLM underneath. Different behavior. That shift matters because AI is moving from conversation to action.

The real question is not: "Can AI talk?" It is: "Can AI independently handle workflows humans currently manage?"

This comic tries to explain that difference in the simplest possible way through Suresh and Ramesh. And maybe the most uncomfortable possibility:

One day humans may work for AI Agents, not just with them.

(Note: Visual is AI-generated using detailed prompting and idea direction.)

AI AGENTS: CHATBOTS WITH LEGS?

⇒ They don't just reply anymore. They decide, use tools, and finish tasks. ⇐
