Knowing AI is becoming a basic life skill.

When I was younger, being able to read and write made you literate. 📖

A few decades later, being able to use a computer became an important part of literacy. 💻

Today, I feel AI literacy belongs in the same category.

You do not need to be a science graduate. You do not need to be an engineer. You do not need to know programming.

But you should know what AI can do, what it cannot do, how to use it effectively, and where to be cautious.

There are hundreds of courses, videos, and playlists available today, many of them free. Among the beginner courses I have seen, I would recommend "YUVA AI for ALL" by [Jaspreet Bindra](#) and [Anuj Magazine](#).

It is a self paced course of about 4 to 5 hours with quizzes embedded throughout. It is free, beginner friendly, and comes with a certificate on completion. Btw, I have done it myself (certificate below) 🎓

Developed under the [IndiaAI](#) Mission and launched by the [Ministry of Electronics and Information Technology](#) (MeitY), India.

Course Link : https://lnkd.in/d_V5mRGP

Available in major Indian Languages: You can select your preferred language from while ENROLL-ing. 🌐

If you have been postponing learning AI because it looks too technical, this is a good place to start. 😊
