🎉 4,000+ strong and just getting started! 🚀

Grateful to each one of you who has followed, shared, commented, and engaged with the "Pune AI Community (PAIC)". This milestone isn't just a number, it's a reflection of a growing movement to make AI accessible, inclusive, and meaningful for everyone.

Together, we're actively bridging the gap in AI knowledge across Pune, making sure AI doesn't stay limited to a few, but reaches many. 💡 "Artificial Intelligence from classes to masses", this is not just our tagline, it's our purpose.

Through our initiatives, we aim to simplify AI and create real impact:

- ◆ LetsAI: 1-hour online seminars to spark learning (already started, about 10 sessions done so far)
- ◆ Zero2Hero: hands-on, in-person workshops for deep dives
- ◆ A platform to showcase ideas, projects, startups, and opportunities

A special thanks to everyone who has contributed, whether by attending sessions, sharing insights, or simply cheering us on. You are the reason this community thrives. 🙌 If you believe in democratizing AI, help us grow even stronger:

 What topic should we explore next? Drop your ideas below!

Also, just to check how ready or interested you are in AI, here is a quiz question:

You're training a binary classification model on an imbalanced dataset:

- 95% of samples belong to Class A
- 5% belong to Class B

Your model achieves "95% accuracy" on the test set.

 Question: Is this model actually good? If not,

- What could be going wrong?
- Which evaluation metrics would you use instead of accuracy?
- How would you improve the model?

 Drop your thoughts below!
