Did you hear? 🤖 Claude Code's code got leaked!!!

Looks like there are 11 layers of architecture. Thousands of lines. An agent orchestration platform disguised as a terminal chat. 🤖

No, we have not looked at it, but here are some findings collected from different sources and tweets 📌

1 **CLAUDE.md** is loaded not just at session start but every single turn. Every. Single. Turn. So it is very critical to have it well made. Not nothing and not the whole manual. Put your architecture decisions in there. Your file conventions. Your testing patterns. Your "never do this" rules. The model reads them every single turn. 📄

2 Subagents share the prompt cache. Parallelism is basically free. Most people use Claude Code like a single worker. One task at a time. Have say five agents. Same cost as one. Because they all hit the prompt cache. ⚡

3 There are five compaction strategies. Context pressure is a real problem. Meaning use `/compact` proactively. Do not wait for the system to auto compact and lose context you care about. 💬

4 Sessions are persistent and resumable. Stop starting fresh.

Every conversation is saved as JSONL and the source code supports:--continue to resume your last session and --resume to pick a specific past session 🔄

Did you know all these features? Let me know anything new that you have gathered from the leak. 👁

Btw, this is the reality check: You are one npm away from a disaster!! ✨
